

Dart Sails & Covers

Genoa Cover

Criss/cross lacing line to close the cover up making it tight around the sail, stopping any excess cover flapping in the wind.

Zip running full length of the cover

option of an opening in the cover for the headsail sheets

Made from "Weathermax" lightweight and very soft. Fully breathable yet excellent water and UV resistance and not susceptible to chafe

WeatherMAX[™]

Dart Sails produce a cover for rolled up headsails. Designed for racing boats or performance cruising boats that prefer not to have UV strips on the leech & foot of their headsail. The Genoa Cover wraps around the rolled up sail & closes with a zip running the full length of the cover. Simply attach the spinnaker halyard to the top of the cover, wrap the top of the cover around the rolled up sail; one person will hoist the halyard whilst a second person holds the zip slider and feeds the cover around the sail

as the cover is hoisted. The covers' circumference will be slightly bigger than the rolled up sail so the cover easily slides over the sail, once hoisted a criss/cross lacing line is tensioned closing the cover up making it tight around the sail thus stopping any excess cover flapping in the wind. An option of an opening in the cover for the headsail sheets is available if required. If you don't want heavy or unsightly UV strips on your headsail or have multiple headsail choices, the Dart Sails Genoa cover is the ideal solution.
