

# Dart Sails & Covers

## Enclosures

We use a high quality 30 thou window material. We can offer 'Crystal Clear' the premium upgrade for crystal clarity, UV resistance and is scratch resistant, reducing tiny scratches that can make the window seem hazy.

Roll away side screens – allows for easier access to and from the cockpit when sailing or use of cockpit winches when sailing.

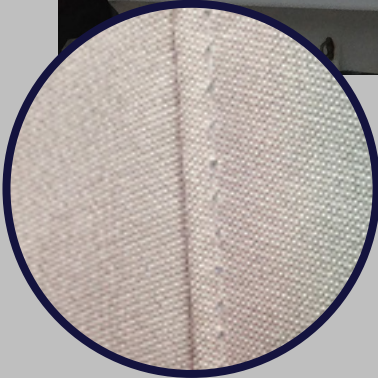

Heavy Duty cast stainless steel clamps and end plugs for large hoods or for charter boats where the cover can be roughly handled.

Zips sewn onto the back to facilitate joining to a sprayhood.

We use anti-wick thread which swells up when wet to make the cover water proof.

Our Cockpit enclosures for yachts zip onto the back of a sprayhood. These are custom covers so can be tailored to suit your exact requirements, so the position of the zips, openings, windows and roll up ties can be tailored to suit your requirements. We can make the covers so that the sides and rear section can be unzipped completely leaving a Bimini for nice weather. We would make a plastic pattern

of the cover and then bring that back to our loft in Dartmouth where we use the pattern to manufacture the new custom covers, rather than copying original covers which never result in a satisfactory fit. Our covers are all made here in our Dartmouth loft by very experienced local cover makers and are not imported. The prices include patterning, making and fitting the cover and any fastenings required.
